

CORPORATE DOSSIER 2022

WHO ARE WE?

MIGUÉLEZ SEATING is part of a family holding company run by the third generation of the same family.

Our company was born in 1951 as a result of the business concerns of the brothers Luis and José Miguélez. The activity developed in those early years consisted in the manufacturing of TV stands, camping chairs and folding seats for multi-use industrial vehicles.

The link between MIGUÉLEZ and the automobile sector resulted in a rapid awareness of the need for TOTAL QUALITY as an unavoidable goal.

In 1976, MIGUÉLEZ began to manufacture the first sets of armchairs and tables for an incipient sector of the game.

In the 90's, 80% of the bingo halls of the IBERIAN PEN-INSULA (900) were equipped with our products. The tables of MARMOL-K were the constant in all the bingos. Nowadays, many of those tables continue to provide their services in halls all over Europe.

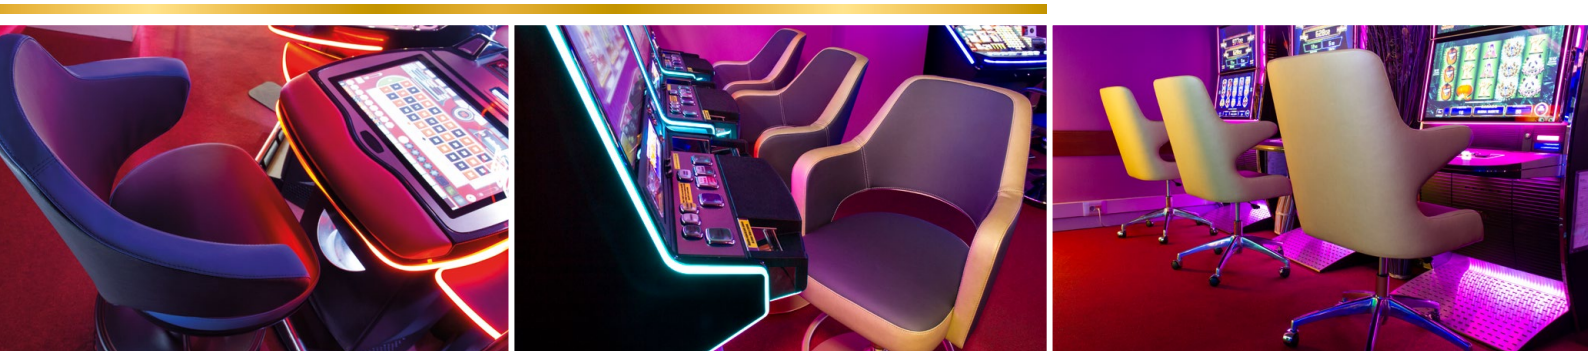

In 1999, Italy creates a gaming law. MIGUÉLEZ supplies 11,000 armchairs and thousands of tables to equip more than 40 bingo halls in the transalpine country. In the year 2018, 1,500 chairs were supplied to our Italian customers.

The specialization as manufacturers of stools for SLOT machines occurs naturally as the game evolves in this direction.

Right now, MIGUÉLEZ SEATING is a leading company in Spain and a reference in the European market, with products present in Portugal, Italy, France, or Switzerland, as well as an incipient presence in the American market in countries such as Chile, Peru, Panama, the Dominican Republic or USA.

All this has allowed us to reach a sales volume of € 270 million throughout last year, 2019.

**MIGUÉLEZ SEATING is
a leading company in
Spain and a reference in
the European market.**

PRODUCTS AND SERVICES

Products

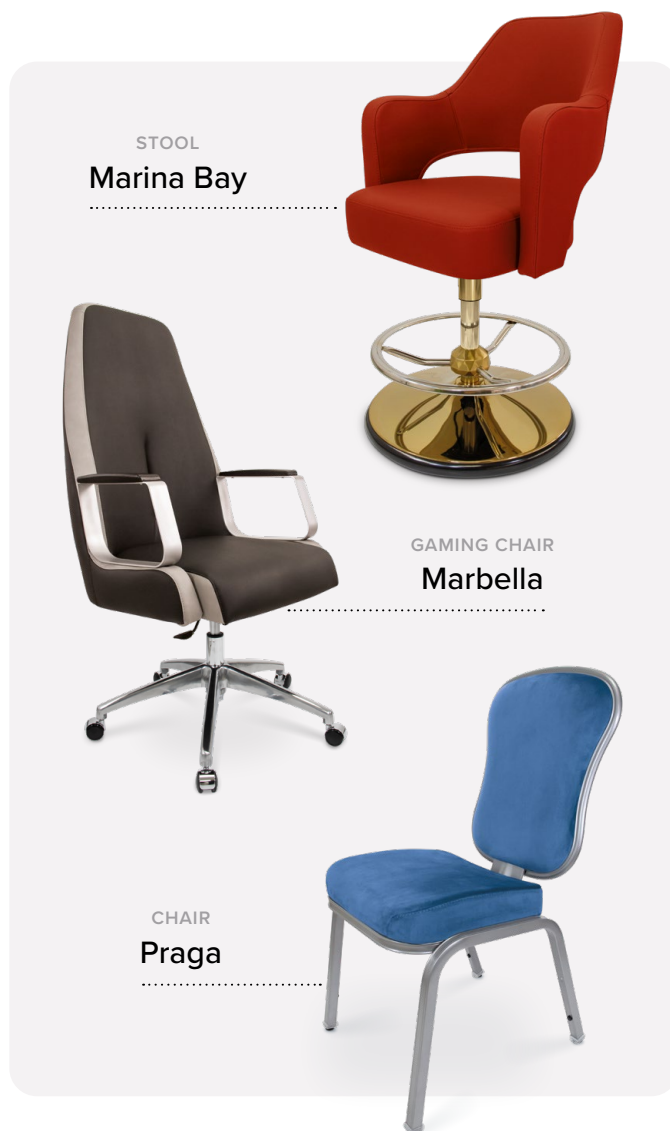

Our product range can be divided into 3 main categories:

- 1. Casinos:** Within this category we offer our range of stools.
- 2. Bingos:** Chairs and tables make up the special products for bingos.
- 3. HORECA:** Conference chairs, banquet chairs, tables and other accessories are the products we sell to the HORECA sector.

The gaming sector and the HORECA sector are, therefore, our main target. Quality, design and innovation are established as the 3 fundamental pillars on which all our elaborations are based.

If there is something that we are particularly proud of at MIGUÉLEZ SEATING, it is the continuous labor of innovation realized by our R&D department, embodied in all the patents and models that have been recognized by the corresponding national and international institutions.

Our products accredit compliance with the most demanding standards in the world, and offer a 7-year warranty on all non-upholstered components of our models of chairs and stools, which is the largest coverage available in Europe.

Services

For all our products, we offer our clients the services of embroidery, spare parts and reupholstering.

As for embroidery, we offer the possibility of customizing all our products. Our graphic design department will help you find the best option for including your logo.

En Miguélez Seating we are committed to **the total customization of our products**. For example, we offer the possibility of customizing the finishes of the metal parts of our stools and chairs.

Likewise, we also offer a **service of replacement of certain parts, such as wheels**, gas springs, bases or other elements (excluding textiles) that make up our stools and chairs.

Finally, and to provide a new life to the parts, in Miguélez Seating we have a reupholstering service where our experts can advise you, being able to choose from a wide variety of colors and fabrics of the highest quality.

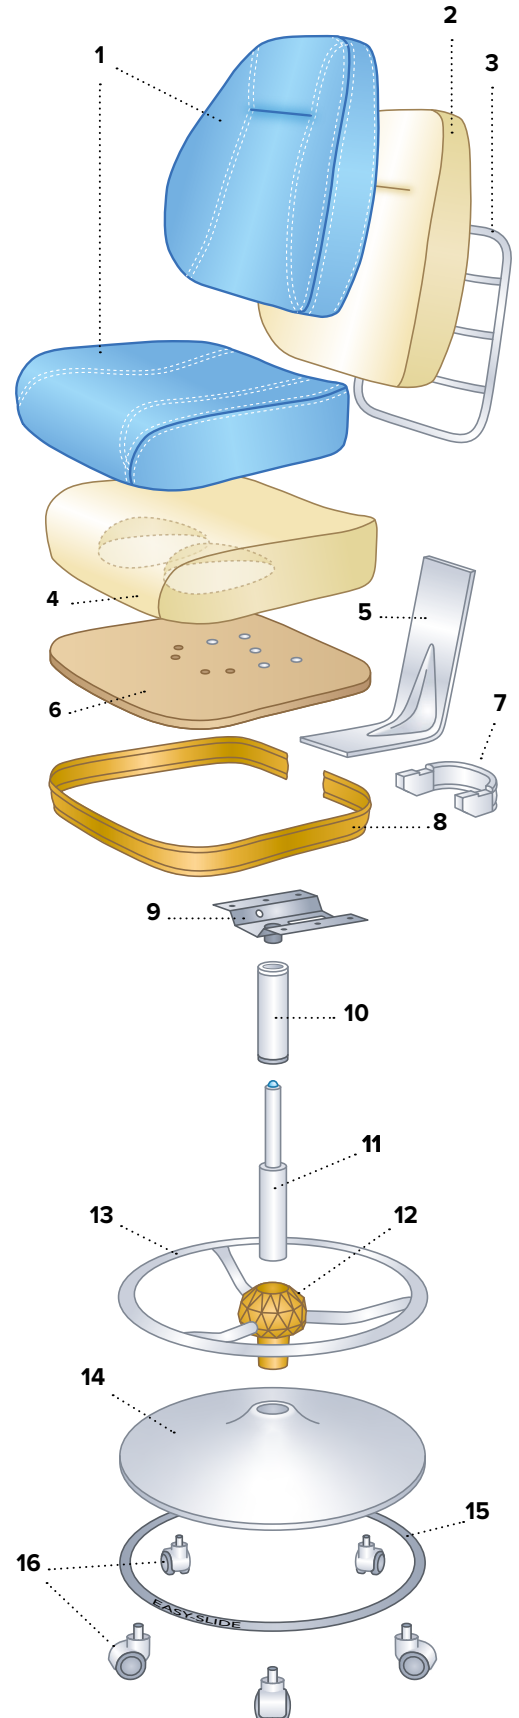

R&D AND QUALITY

One of the highlights of our collection and, in particular, when we talk about our stools and chairs specially made for the gaming sector, lies in the different solutions adopted to achieve an improvement in performance and comfort during use.

And this is summarized and materialized through a key concept: R&D and a series of solutions that have user comfort as a goal.

Quality of the components

1. **FABRICS FOR UPHOLSTERY:** Fabrics with anti-bacteria protection and protection against scratches and stains. All seams are reinforced and double topstitched with contrasting thread. Wide selection of colours.
2. **POLYURETHANE BACK:** Injection moulded at 30 kg/m³. Anatomically designed to improve lumbar rest. WE DO NOT USE GLUE IN THE UPHOLSTERY PROCESS.
3. **BACK FRAMEWORK:** Built in steel structure, quality DD11. Element solidly joined to DELTA FLEX by MAG welding.
4. **POLYURETHANE SEAT:** Injection moulded at 55 kg/m³ with Sectorised Variable Firmness system (FVS). WE DO NOT USE GLUE IN THE UPHOLSTERY PROCESS.
5. **DELTA FLEX:** Made of 6 mm thick sheet steel, quality DD11 or stainless steel 200. Postformed at 108° and reinforced with DELTA notch.
6. **SEAT BASE:** 12 mm thick birch plywood, with galvanised anti-twist threaded rivets. Includes breathing holes.
7. **HANDLE:** Made of chrome or gold ABS. Fixed to the bottom of the wooden seat base, finishing off the ornamental perimeter ("bumper").
8. **BUMPER:** Perimeter protective border in PVC thermoplastic at high temperature. It is supplied glossy black by default. Gold and silver mate available.
9. **SEAT SUPPORT:** Postformed development in 3 mm thick sheet steel. Polyester finish. Reinforced coupling knot (heavy-duty). Includes activation lever.
10. **SPRING GAS COVER:** Stainless steel 200 quality. Oscillating joint system with anti-friction nylon ring for gas spring protection.
11. **GAS SPRING MULTIFUNCTION:** Height recovery and self-centring. Quality: Class 3. On all stools by default.
12. **SPHERICAL/PRISMATIC KNOT:** (Patent: PCT/ES2018/070190 and PCT/ES2018/070189). ADC10 aluminium, high-shine/gold polished. Breakage point on the central axis above 4500 kg.
13. **CIRCULAR FOOTREST:** Stainless steel quality (200 series). Spokes made of 20x1.5 steel tube and footrest ring made of 25x1.5 postformed. Hidden MAG welds.
14. **BASES:** Trumpet: Constructed in carbon steel with diameters of 500 mm, 550 mm and 600 mm and with a thickness of 2 mm. Five Star and Four Star: Constructed in aluminium injection ADC12.
15. **EASY-SLIDE RING PAD:** (Patent: PCT/ES2018/070191).
16. **WHEELS:** With auto-blocking system when weight is applied. PU wheel tread. Anti-thread protection. ABS chrome/gold trim cover.

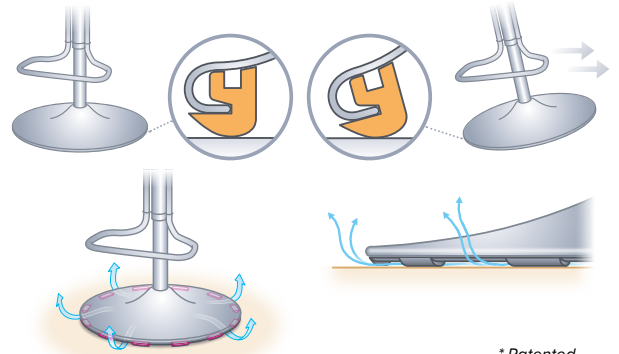

CHARACTERISTICS AND FUNCTIONALITIES (1)

EASY-SLIDE

Circular border of expansive adjustment developed to facilitate displacements, minimising friction and noise, and maximising the protection of hard floors. The stool sits on 12 bumps that raise it slightly, allowing air circulation. In this way, not only is it easier to move them, but condensation, the appearance of moulds and the associated bad smells are prevented. INCLUDED IN ALL TRUMPET BASES (50/55 cm).

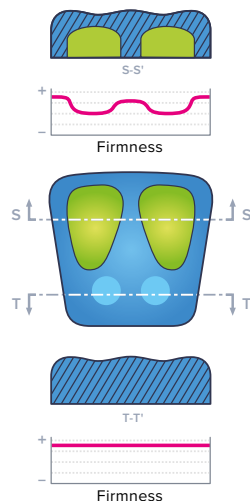

* Patented

FVS: Sectorised Variable Firmness

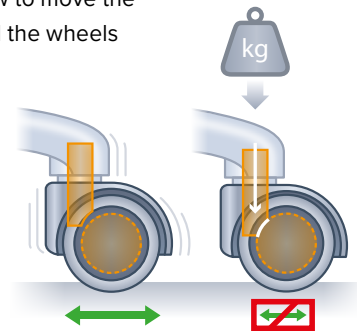

It allows for a better accommodation by reducing the firmness of the polyurethane foam in the zones of lower pressure of the posterior femoral area. Increases comfort and facilitates blood circulation.

SIT & BRAKE WHEELS

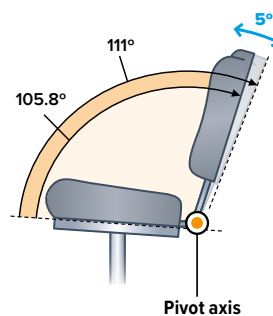

Special for stools: allow to move the stool when empty; and the wheels brake when occupied.

OPTIONALLY INCORPORATED IN ALL BASES WITH WHEELS.

DELTA FLEX

Progressive retention oscillating system based on DELTA geometry. It allows variations of up to 5° in the angle between seat and back, facilitating the change of posture, always adapting to the weight and physiognomy of the user.

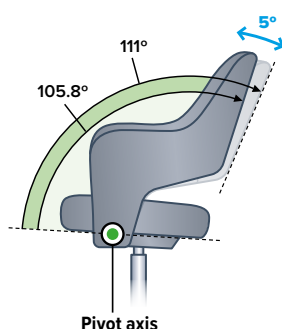

Pivot axis

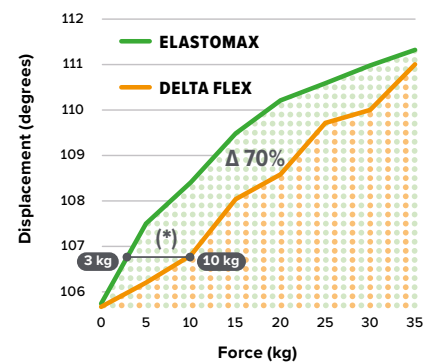

ELASTOMAX

Oscillating flexion system with progressive retention. The effort is supported by a polyurethane elastomer that works under compression. A hinge converts the force on the backrest into a rotating movement. It allows variations of up to 5° in the angle between seat and backrest.

Pivot axis

Effort applied / deformation of the backrest relationship

* The reaction of the ELASTOMAX system is, on average, 70% more sensitive, requiring 3.3 times less effort for the same deformation at the beginning.

* Patented

CHARACTERISTICS AND FUNCTIONALITIES (2)

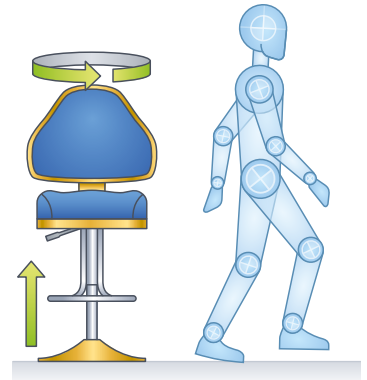

ARMRESTS KIT

A single structure joined by two screws, transforms any of our models into a comfortable armchair. Constructed in non-upholstered acrylic material, its durability is guaranteed. CAN BE ADDED OR TAKEN OFF AT ANY TIME THROUGHOUT THE LIFE OF THE STOOL.

MULTIFUNCTION GAS SPRING

They are devices of rotation and height regulation, which recover the initial position when seat is vacant. The recovered position is the maximum height. In this way, the seats are aligned and ready for the next user.

BUMPER

Impact protection edge placed on the perimeter of the seat (and backrest on some models). With a shiny black colour, it is incorporated by default in all models (except MACAO, MARINA BAY and those of XL size). It is also available in matt GOLD and SILVER.

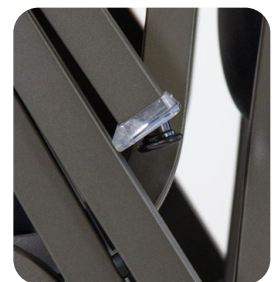

HANDLE

It provides the best traction point for the movement of the stool considering its centre of gravity and the ergonomics of the stool. Made of chrome or gold ABS.

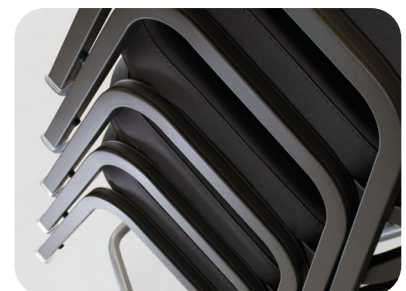

SWIVEL GLIDE WITH ANTI-FRICTION FORM

Included in the 4 legs of our stackable models, they have an anti-return system so they can not be removed. They are specially designed to facilitate the sliding of one chair over another, and they protect the metallic frame from scratches.

SCRATCH PROTECTOR

Plastic peg that avoids the contact of the legs when chairs are stacked and, therefore, protects the surface from scratches when handling.
